

FOR IMMEDIATE RELEASE

DMSI releases updates to MAINTelligence™ and InspectMT™ with powerful new features for 2025

North Vancouver, BC – 2025 — DMSI is thrilled to announce a new set of updates to its flagship platforms, MAINTelligence™ and InspectMT™ that improve compliance tracking, photo documentation, upload performance, and mobile data collection.

“We wanted to level-up our already comprehensive and integrated suite of products. Clients are looking for powerful tools that make life just a little easier, faster, and more accurate; and being on top of advancements like this helps you achieve that,” says Todd Chow, DMSI’s VP of Product.

Update highlights for MAINTelligence™ 5.8 include: Improved compliance tracking, including photos on work requests, sample tracking enhancements, smarter “Find and Replace”, and a streamlined system administration for ease of use. The updates to InspectMT™ feature FLIR camera integration, photo and video support for work requests, and faster uploads for Android users.

These system updates to our software are designed to help industrial maintenance teams collect, view, and act on asset health data more efficiently and accurately than ever before to lower maintenance and operating costs across the board for a more positive bottom line.

DMSI offers the industry’s most proven, data-driven solution to asset management for a more positive bottom line.
